## Executive Summary

---

Disruptions, from natural disasters to cyber incidents, pose real risks to Rocket, LP's operations. The Resilience Program provides a unified framework to protect our clients, sustain critical services, and support recovery and reconstitution after an event. By fostering cross-team collaboration, embedding resilience into our culture, and anticipating emerging threats, we strengthen Rocket, LP's ability to adapt, respond, and thrive in a changing environment.

## Vision

---

*Rocket's vision is to cultivate a culture of proactive resilience, not just response. The Resilience team is committed to anticipating and navigating changing landscapes to protect operations, ensure swift recovery, and enable sustainable growth, fortifying Rocket, LP. Through ongoing, iterative threat and impact assessments, the team creates and exercises comprehensive plans, embedding resilience as a cornerstone of Rocket's culture.*

## Mission

---

The mission of the Resilience program is to strengthen Rocket's ability to prevent, control, respond, and recover from disruptions by executing the resilience and business continuity management lifecycles, with a focus on client experience.

## Program Overview

---

### Goals

1. **Enhance Resilience:** Reduce risk exposure and increase Rocket's ability to anticipate, withstand, and recover from disruptions
2. **Protect Critical Operations:** Ensure continuity of critical business processes and resources through proactive planning and preparation.
3. **Enhance Response Readiness:** Enable coordination, timely response, and recovery through structured incident and crisis management protocols.

### Scope

The Resilience Program applies to all publicly traded, in-perimeter companies within Rocket, LP, encompassing all business units and functions. Its emphasis is on protecting critical operations, technology, and services through coordinated continuity, recovery, and crisis management efforts.

## Strategy

---

The Resilience program follows a continual improvement cycle aligned with Business Continuity Management Systems (BCMS) and Disaster Recovery (DR) industry standards and best practices. The program's strategy is built around five core components:

- **Resilience Requirements and Assessments** – Use threat- and impact-based assessments to guide preparedness, continuity, and recovery planning
- **Business Continuity Planning (BCP)** – Maintain and distribute current, tested plans for critical operations
- **Disaster Recovery Planning (DRP)** – Protect and restore critical technology and data through resilient recovery strategies
- **Crisis Management** – Enable and facilitate timely, coordinated decision making and communication during crises
- **Test, Training, & Exercise (TT&E)** – Build resilience and readiness through regular exercises, targeted training, and scenario-based validation

## Governance, Oversight, and Responsibilities

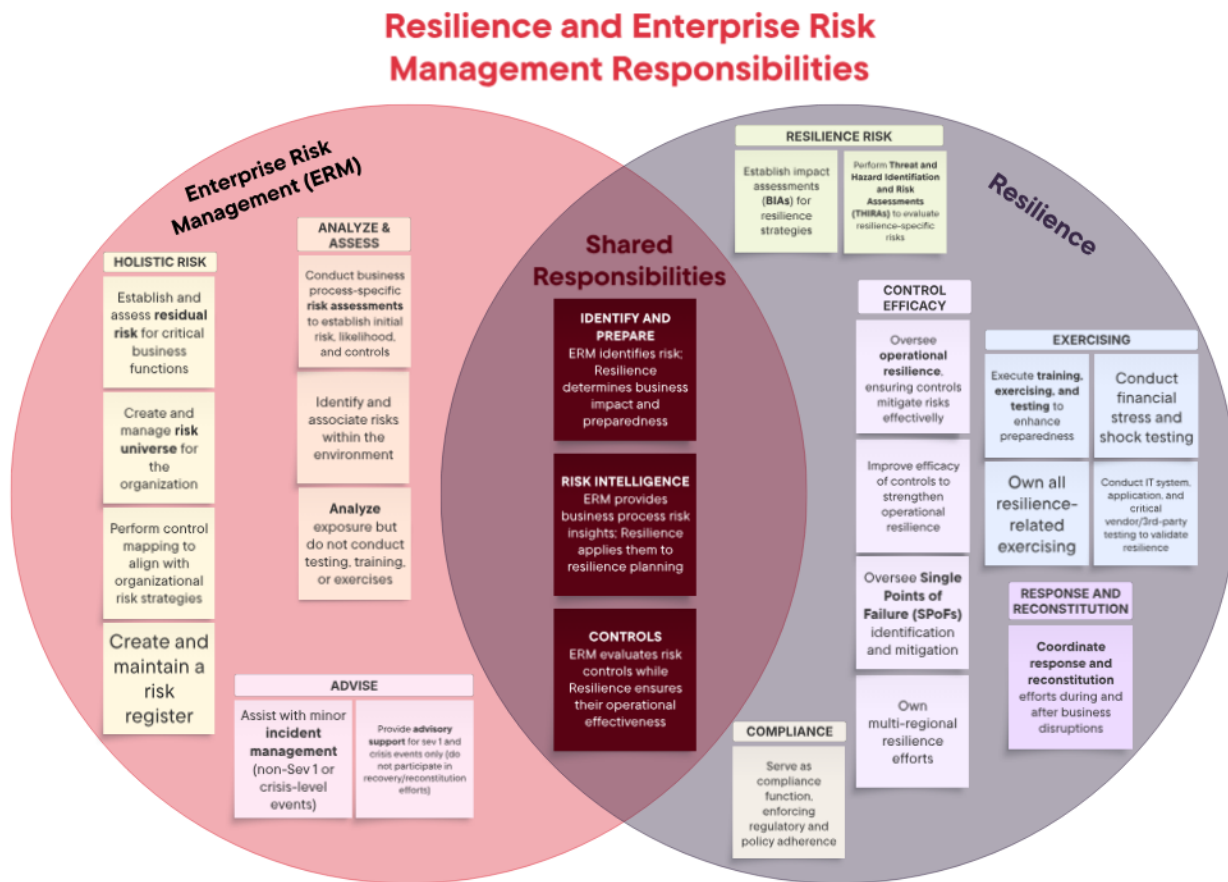

---

Governance is provided by Rocket, LP's Enterprise Risk Management (ERM) and Legal teams to ensure alignment with company strategy, regulatory requirements, and enterprise risk posture.

- **Resilience Team** – Sets strategy, leads cross-functional planning, facilitates crisis management communication, and drives continuous improvement
- **Business and Technology Leaders** – Implement and maintain resilience capabilities within their business areas
- **Executive Leadership** – Sets strategic direction, approves priorities, and resolves escalations as needed

## Resilience and ERM Responsibilities

The Resilience team collaborates closely with ERM to integrate risk insights into continuity planning and crisis preparedness efforts. See the graphic below for a visual representation of roles and program structure.

## Lines of Effort (LOEs)

---

The Resilience program coordinates cross-functional planning, readiness, and response across the following key areas. These lines of effort (LOEs) ensure all critical functions are supported during disruptions with clear ownership and alignment to enterprise priorities.

### Business Continuity

- Develop, maintain, and coordinate continuity plans with business owners and vendors for critical business processes, ensuring continual operations during disruptions.
- Partner Teams
  - Business Area Subject Matter Experts (SMEs)
  - Business Area Leaders
  - Vendor Risk management
- **Decisions Owned By:** Business Area Leaders and Technology Owners with Vendor Oversight when applicable

### Technology

Safeguard critical infrastructure, applications, and data through disaster recovery planning, technology resilience measures, and incident response collaboration.

- Partner Teams
  - Major Incident Management (MIM)
  - Network Operations Center (NOC)
  - Technology
- **Decisions Owned By:** Chief Technology Officer (CTO)

### Information Security

- Coordinate cyber security incident response, threat detection, and recovery strategies with partner teams.
- Partner Teams
  - Security Incident Response Team (SIRT)
  - Security Operations Center (SOC)
- **Decisions Owned By:** Chief Information Security Officer (CISO)

## Physical Safety Emergency Response

- Incorporate physical security, emergency response, and facility protection measures into resilience activities in collaboration with Rock Security.
- Partner Teams
  - Rock Security Command Center (RSCC)
  - Emergency Response Team (ERT)
- **Decisions Owned By:** Rock Security Leadership

## Crisis Management vs. Incident Management

- Distinguish between enterprise-level crises and operational incidents, ensuring appropriate escalation, governance, and communication for crisis events
- Partner Teams
  - Mission Control (i.e., Crisis Management Team)
  - Major Incident Management (MIM)
  - Rock Security Command Center (RSCC)
- **Decisions Owned By:** Executive Leadership (crisis) and Operational Leaders (incident)

## Crisis Communication

- Coordinate timely, accurate, and audience-appropriate communication during disrupted and emergency events.
- Partner Teams
  - Emergency Response Team (ERT)
  - Rock Security Command Center (RSCC)
  - Mission Control (Crisis Management Team)
- **Decisions Owned By:** Business and technology area leadership and Mission Control team, facilitated by the Resilience team

## Legal Compliance

- Ensure resilience activities align with regulatory requirements, contractual obligations, and risk posture with legal review where appropriate.
- Partner Teams
  - Enterprise Risk Management (ERM)
  - Legal Teams
- **Decisions Owned By:** Executive Vice President (EVP), Deputy Legal Officer

*For detailed escalation criteria, team structure, and communication protocols, refer to the documents in the Appendix below.*

## Metrics, Program Review, and Continuous Improvement

---

The Resilience Program's effectiveness is measured using defined metrics established in the Resilience Policy and reviewed regularly to ensure alignment with Rocket, LP's risk posture and strategic objectives. These metrics will assess plan accuracy, recovery capabilities, training participation, and exercise outcomes.

Program performance will be reviewed on a regular cadence to ensure alignment with Rocket, LP's risk posture and strategic objectives. Lessons learned from incidents, exercises, and stakeholder feedback will drive continuous improvement efforts. Updates to program strategies, tools, and processes will be incorporated as needed to strengthen resilience across the enterprise.

### Points of Contact

For questions on the Resilience Program, please reach out to the following Team Members:

- Evan Shawver, Director: [EvanShawver@Rocket.com](mailto:EvanShawver@Rocket.com)
- Rin Jones: Senior Resilience Manager: [RinJones@Rocket.com](mailto:RinJones@Rocket.com)
- Please direct general Resilience questions to the Resilience Email Distro: [Resilience@Rocket.com](mailto:Resilience@Rocket.com)

## Version History

This charter is reviewed annually and updated as needed.

|   | A               | B             | C            | D                                                                                |

## Glossary of Terms

Key terms used in this Procedure document are defined by law, regulation, and/or company policy. In the event federal and state laws have similar or conflicting definitions, the terms have been defined to meet all applicable regulatory requirements.

1. **Alternate Site**: A site held in readiness for use during/following an invocation of business or disaster recovery plans to continue urgent and important activities of an organization
2. **Backup (Data)**: A process by which data (electronic or paper-based) and programs are copied in some form to be available and used if the original data from which it originated are lost, destroyed, or corrupted
3. **Backup Generator**: An independent source of power, usually fueled by diesel or natural gas
4. **Business Continuity**: The strategic and tactical capability of the organization to plan for and respond to incidents and business disruptions to continue business operations at an acceptable predefined level
5. **Business Continuity Management (BCM) Lifecycle**: The stages of activity that an organization moves through and repeats with the overall aim of improving organizational resilience
6. **Business Continuity Management System (BCMS)**: Part of the overall management system that establishes, implements, operates, monitors, reviews, maintains and improves business continuity
7. **Business Continuity Plan (BCP)**: Documented procedures that guide organizations to respond, recover, resume, and restore to a pre-defined level of operation following disruption
8. **Business Continuity Management (BCM)**: Holistic management process that identifies potential threats to an organization and the potential impacts to business operations if those threats were realized. The BCM provides a framework for building organizational resilience with the capability of an effective response that safeguards the interests of its key stakeholders, reputation, brand, and value-creating activities
9. **Business Impact Analysis (BIA)**: Process of analyzing activities and the effect that a business disruption might have on them
10. **Call Tree**: A document that graphically depicts the calling responsibilities and the calling order used to contact leaders, team members, clients, vendors, and key contacts in the event of an emergency, disaster, or severe outage situation
11. **Certificate of the Business Continuity Institute (CBCI)**: This entry level certified membership grade is for professionals that have passed the Certificate of the BCI (CBCI) Examination
12. **Cold Site**: An environmentally equipped facility that provides only the physical space for recovery operations while the organization using the space provides its own office equipment, hardware and software systems and any other required resources to establish and continue operations.
13. **Continuity of Operations (COOP)**: Management policy and procedures used to guide an enterprise response to a major loss of enterprise capabilities or damage to its facilities. It defines the activities of individual departments and agencies and their subcomponents to ensure their essential functions are performed

14. **Control Framework**: A model or recognized system of control categories that covers all internal controls expected within an organization
15. **Crisis**: Abnormal and unstable situation that threatens the organization's strategic objectives, reputation, or viability
16. **Crisis Management**: The overall direction of an organization's response to a disruptive event, in an effective, timely manner, with the goal of avoiding or minimizing damage to the organization's profitability, reputation, and ability to operate
17. **Crisis Management Team (CMT)**: A team consisting of key leaders (e.g., media representative, legal counsel, facilities manager, disaster recovery coordinator), and the appropriate business owners of critical functions who are responsible for recovery operations during a crisis
18. **Critical Business Functions (CBF)**: Vital functions without which an organization will either not survive or will lose the ability to effectively achieve its critical objectives
19. **Critical Infrastructure**: Physical assets whose incapacity or destruction would have a debilitating impact on the economic or physical security of an entity (e.g., organization, community, nation)
20. **Customer Relationship Management System (CRM)**: A computer application or integrated set of applications which brings together all aspects of customer communications and management
21. **Data Backup Strategies**: Data backup strategies will determine the technologies, media and offsite storage of the backups necessary to meet an organization's data recovery and restoration objectives
22. **Data Protection**: Statutory requirements to manage personal data in a manner that does not threaten or disadvantage the person to whom it refers
23. **Disaster**: Situation where widespread human, material, economic or environmental losses have occurred which exceeded the ability of the affected organization, community, or society to respond and recover using its own resources
24. **Disaster Management**: Strategies for prevention, preparedness and response to disasters and the recovery of essential post-disaster services
25. **Disaster Recovery (DR)**: The process, policies, and procedures related to preparing for recovery or continuation of technology infrastructure, systems and applications which are vital to an organization after a disaster or outage
26. **Disruption**: An event that interrupts normal business, functions, operations, or processes, whether anticipated (e.g., hurricane, political unrest) or unanticipated (e.g., a blackout, terror attack, technology failure, or earthquake)
27. **Electronic Vaulting**: The transfer of data by electronic means to a backup site, as opposed to the physical shipment of backup tapes or disks
28. **Emergency Operations Center (EOC)**: The physical location at which the coordination of information and resources to support incident management (on scene operations) activities normally takes place
29. **Escalation**: The process by which an incident is communicated upwards through an organization's business continuity and/or incident and crisis management reporting process

30. **Event:** Occurrence or change of a particular set of circumstances
31. **Exercise:** A people-focused activity designed to execute business continuity plans and evaluate the individual and/or organizational performance against approved standards or objectives
32. **Federal Emergency Management Agency (FEMA):** the US agency responsible for responding to wide area disasters and emergencies
33. **Financial Impact:** Actual or potential losses incurred
34. **Gap Analysis:** Identifies discrepancies between BCM/Crisis Management requirements versus what currently exists within the operational environment
35. **Good Practice Guidelines (GPG):** A guide to global good practice in Business Continuity; The body of knowledge produced by the Business Continuity Institute
36. **Hardening:** The process of making something more secure, resistant to attack, or less vulnerable
37. **Hot Site:** A facility equipped with full technical requirements including IT, telecoms, and infrastructure, and which can be used to provide rapid resumption of operations
38. **Impact Analysis:** The process of analyzing all operational activities and the effect that an operational impact might have upon them
39. **Incident:** Situation that might be, or lead to, a disruption, loss, emergency, or crisis
40. **Infrastructure:** The term infrastructure refers to the entire system of facilities, equipment, and services needed for the operation of the organization
41. **Loss:** Unrecoverable resources that are redirected or removed because of a Business Continuity event
42. **Major Incident Management (MIM):** A team consisting of relevant Team Members that manage the incident locally, liaise with emergency services (if applicable), take action to protect Team Members and recover assets, and ensure the continuity of business operations
43. **Maximum Tolerable Period of Disruption (MTPD):** The time it would take for adverse impacts, which might arise because of not providing a product/service or performing an activity, to become unacceptable
44. **Recovery Point Objective (RPO):** The point in time to which data is restored and/or systems are recovered after an outage
45. **Recovery Time Objective (RTO):** The period within which systems, applications, or functions must be recovered after an outage. RTO includes the time required for: assessment, execution, and verification
46. **Resilience:** The process and procedures required to maintain or recover critical services during a business interruption  
**Operational Resilience:** Ability of an organization, staff, system, telecommunications network, activity, or process to absorb the impact of a business interruption, disruption, or loss and continue to provide an acceptable level of service
47. **Response:** The reaction to an incident or emergency to assess the damage or impact and to ascertain the level of containment and control activity required

48. **Service Level Agreement (SLA)**: A formal agreement between a service provider (whether internal or external) and their client (whether internal or external), which covers the nature, quality, availability, scope, and response of the service provider
49. **Service Level Management (SLM)**: The process of defining, agreeing, documenting and managing the levels of any type of services provided by service providers whether internal or external that are required and cost justified
50. **Single Point of Failure (SPOF)**: Unique (single) source or pathway of a service, activity and/or process; Typically, there is no alternative, and loss of that element could lead to total failure of a mission critical activity and/or dependency.
51. **Stakeholder**: Individual or group having an interest in the performance or success of an organization e.g., customers, partners, employees, shareholders, owners, the local community, first responders, government, and regulators
52. **Succession Plan**: A predetermined plan for ensuring the continuity of authority, decision-making, and communication in the event that key members of executive management unexpectedly become incapacitated
53. **System**: Set of related technology components that work together to support a business process or provide a service
54. **Threat**: A potential cause of an unwanted incident, which may result in harm to individuals, a system or organization, the environment, or the community
55. **Vulnerability**: The degree to which a person, asset, process, information, infrastructure, or other resources are exposed to the actions or effects of a risk, event, or other occurrence
56. **Warm Site**: An alternate processing site which is equipped with some hardware, and communications interfaces, electrical and environmental conditioning which is only capable of providing backup after additional provisioning, software or customization is performed
57. **Workaround Strategies**: Alternative procedures that may be used by a functional unit(s) to enable it to continue to perform its critical functions during temporary unavailability of specific application systems, electronic or hard copy data, voice or data communication systems, specialized equipment, office facilities, personnel, or external services
