All Risks by Score	6

Overview and Scope

The Risk Assessment is used to determine and evaluate the potential hazards and associated risks to a certain location that may cause a disruption to the Organization's critical operations. The Assessment will also help the Organization prioritize the risk controls needed to minimize and potentially mitigate the risk based on the level of risk and potential impact to the business.

The following key areas have been reviewed and identified in the Risk Assessment:

1. Overall Risk Rating/Risk Score for the Location/Site
2. Total number of Environmental, Man-Made, Process and IT/Technical Threats/Risks grouped by severity
3. Detailed Threats/Risks assessed by category with the level of risk calculated based on the following criteria:
 - Likelihood
 - Impact (Overall to Business/Property/Staff)
 - Controls and Control Effectiveness

Methodology

The Risk Assessment questionnaire was filled out for the Location to provide an overall risk score/rating based on the potential threats/risks for each of the following categories:

- **Natural Disaster Threats/Hazards** - Caused by an uncontrollable natural event such as weather conditions
- **Human Made Threats/Hazards** - Caused by human actions or inactions
- **Technology Threats/Hazards** - Caused by a mechanical or automated process has failed or not operated properly
- **Financial Shock Threats/Hazards**

The following key factors are evaluated to determine the overall Risk Rating. Their weighted values are multiplied to calculate a total score.

Impact

This determines the criticality of the interruption without consideration of any existing controls. Those interruptions with high scores are those which can most negatively affect the business operation.

Likelihood

Identifies the chances (probability) of the threat occurring and may be based on historical events and geographic implications, that a particular threat occurs.

Mitigating Controls

These include any control(s) in place that will lessen the severity of an interruption. These types of controls may be put in place to prevent harm from an interruption. They also may be unintentional, such as a building that is located near a fire station, which would reduce the risk of a fire burning out of control and causing great damage. Each interruption can have multiple mitigating factors.

Threat Risk Score

Each threat is assigned a Threat Risk Score. The score is determined by the following formula using the ratings listed below:

Impact * Likelihood * Mitigating Controls

Threat Rating

Each Threat is assigned a rating on a weighting scale based on it's score. This rating reflects the severity of the named Threat to the location, whether Low, Medium or High. All High Risk Ratings must be formally addressed.

Risk Score

After the Risk Threat Assessment has been completed, the Threat Risk Scores are aggregated to determine an overall risk score and rating for the assessment. The score is determined by the following formula using the ratings listed above:

*Impact * Likelihood * Mitigating Controls for every threat / Number of threats*

Risk Rating

Each Risk Assessment is assigned a rating based on it's score. This rating reflects the severity of the Risks to the location.

Score	Rating
0.0	None
> 0.0 to 3.0	Low
> 3.0 to 6.0	Medium
> 6.0 to 9.0	High
> 9.0	Critical

Risk Summary

Low	Medium	High	Critical
22	5	8	15

Critical Risks

Threat/Type	Likelihood	Impact	Mitigating Controls	Control Description	Score	Rating
Computer System Outage (Technology Threats/Hazards)	High	Significant	None	Mass notification capabilities for alerting TMs. Some systems are on a different network so they can be up and running when others cannot.	36.0	Critical
Cyber Attack (Human Made Threats/Hazards)	High	Significant	None	Mass notification capabilities for alerting TMs. Some systems are on a different network so they can be up and running when others cannot. We have an internal and external SOC which includes logging, monitoring, and response. Intrusion Detection tooling. High level security operation personnel. Very mature training and awareness program to engage TMs. 750 Security Champions. Very strong visibility with senior leaders (including CEO) for issues and awareness for issues. Continuous improve of detection controls (Obsidian & CASB). Allure brand monitoring (PR and Marketing).	36.0	Critical
Market/Interest Rate Change (Financial Shock Threats/Hazards)	High	Significant	None	Adjust loan processing accordingly and hedge against the rise in interest rates.	36.0	Critical
Vendor Outage (Technology Threats/Hazards)	Moderate	Catastrophic	None	Vendor oversight and monitoring for critical vendors.	36.0	Critical
Telecom Failure - Data (Technology Threats/Hazards)	Low	Catastrophic	None	Advanced access control to help assist with outages. Backup datacenters that can failover	24.0	Critical
Telecom Failure - Voice (Technology Threats/Hazards)	Low	Catastrophic	None	Advanced access control to help assist with outages. Backup datacenters that can failover	24.0	Critical
Embezzlement / Fraud (Human Made Threats/Hazards)	High	Significant	None	Investigations team works with internal teams from Rocket (RBI), anyone that reports it, to investigate those claims, vise versa.	24.0	Critical
Mortgage Fraud (Human Made Threats/Hazards)	High	Moderate	None	DTRT Team who focus on reviewing potential mortgage fraud at any point in the mortgage pipeline. We verify client income, property, assets, and credit during the mortgage process.	24.0	Critical
Sudden Loss of Key Staff (Human Made Threats/Hazards)	Moderate	Significant	None	documentation in place to address a sudden loss. business specific. call trees for TM redundancy.	18.0	Critical
Liquidity Shock (Financial Shock Threats/Hazards)	Moderate	Significant	None	Review the company's available liquidity on regular basis, at least quarterly to ensure sufficient liquidity is in place.	18.0	Critical
Flooding - Within Building (Natural Disaster Threats/Hazards)	Low	Catastrophic	None	Get reports and work with bedrock to mitigate that flooding.	16.0	Critical
Borrowing Default (Financial Shock Threats/Hazards)	Low	Catastrophic	None	Perform daily warehouse and cash forecasting. Ongoing review and monitoring of required borrowing covenants.	16.0	Critical
Reputation Exposure (Financial Shock Threats/Hazards)	Low	Moderate	None	Perform due diligence on vendors, business partners, and suppliers. Ensure crisis communication plan is in place.	12.0	Critical
Misconfiguration/Team Member Mistake (Technology Threats/Hazards)	High	Minor	None	Checklists and Guidelines for secure application by design (infosec). Extra training for TMs as it relates to changes in technology.	12.0	Critical
Regulatory Change (Financial Shock Threats/Hazards)	High	Significant	None	Collaborate closely with the Government Affairs team to stay informed about regulatory changes, assess the impact on the business, and adjust the business strategy accordingly.	12.0	Critical

Regulatory Change (Financial Shock Threats/Hazards)	High	Significant	None	Collaborate closely with the Government Affairs team to stay informed about regulatory changes, assess the impact on the business, and adjust the business strategy accordingly.	12.0	Critical

Threat/Type	Likelihood	Impact	Mitigating Controls	Control Description	Score	Rating
Ice Storm (Natural Disaster Threats/Hazards)	Moderate	Significant	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	9.0	High
Bomb Threat / Warning (Human Made Threats/Hazards)	Moderate	Significant	None	24/7 monitoring, local support, mass notification. Bomb threat checklists for TMs. Call recordings for threats.	9.0	High
Burglary / Theft (Human Made Threats/Hazards)	Moderate	Significant	None	Access controls in place. Real times alarms that are generated from doors that are broke into. Various areas, can be used anywhere. (forced open, open to long) Deterrents blare and lights up, some are silent alarms.	9.0	High
Terrorism (Human Made Threats/Hazards)	Low	Catastrophic	None	24/7 monitoring services with local resources. Availability to use mass notification. we have internal emergency action plans for terrorism situations.	8.0	High
Freezing Weather (Natural Disaster Threats/Hazards)	High	Moderate	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	8.0	High
Snow Storm / Blizzard (Natural Disaster Threats/Hazards)	High	Moderate	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	8.0	High
Active Shooter (Human Made Threats/Hazards)	Low	Catastrophic	None	Lockdown capabilities of buildings. Various access control for buildings. Supported by local police. 24/7 monitoring and surveillance. Emergency action plans for active shooter.	8.0	High
Pandemic (Natural Disaster Threats/Hazards)	Low	Catastrophic	None	Immediately tell TMs to stay indoors and implement work from home strategy/policy	8.0	High
HVAC Failure (Technology Threats/Hazards)	Moderate	Minor	None	Bedrock manages this.	6.0	Medium
Building Fire (Human Made Threats/Hazards)	Low	Significant	None	Fire suppression systems, location sensors, fire department gets notified immediately. Security Patrols would pick up any sort of bad actor. Fire panel monitoring 24/7 or fire watch. Annual fire drills. 24/7 command center ties into the intelligence team and DPD/DFD. Any Bedrock site, monthly and annual testing of fire systems by a second party.	6.0	Medium
Labor Dispute / Strike (Human Made Threats/Hazards)	Very Low	Significant	None	Escalate if its near our areas and lock down buildings. Telling TMs to stay indoors if needed. WFH capabilities.	6.0	Medium
Artificial Intelligence (Technology Threats/Hazards)	High	Catastrophic	Significant	Currently Assess AI risks and capabilities through vendor review (Auditboard)	4.8	Medium
Arson (Human Made Threats/Hazards)	Low	Moderate	None	Fire suppression systems, location sensors, fire department gets notified immediately. Security Patrols would pick up any sort of bad actor. Fire panel monitoring 24/7 or fire watch. Annual fire drills. 24/7 command center ties into the intelligence team and DPD/DFD. Any Bedrock site, monthly and annual testing of fire systems by a second party.	4.0	Medium

Threat/Type	Likelihood	Impact	Mitigating Controls	Control Description	Score	Rating
Tornado (Natural Disaster Threats/Hazards)	Moderate	Minor	None	Weather monitoring capabilities, mass notification to shelter in place. Service that coordinated weather warnings from the counties.	3.0	Low
Windstorm (Natural Disaster Threats/Hazards)	Moderate	Minor	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	3.0	Low
Power Supply Outage (Technology Threats/Hazards)	Moderate	Minor	None	Manages UPSs and can be used, also includes limited power for specific devices anywhere from 30 MIN - 24 HR. Bedrock and Rocket manages this. Mobile generators are an capability (who owns them?). If access control was down, we can use backup keys to unlock doors and areas.	3.0	Low
Gas Supply Outage (Technology Threats/Hazards)	Moderate	Minor	None	Bedrock manages, impacts to generators.	3.0	Low
Hail Storm (Natural Disaster Threats/Hazards)	Moderate	Minor	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	3.0	Low
Flooding - Near Building (Natural Disaster Threats/Hazards)	Moderate	Minor	None	Get reports and work with bedrock to mitigate that flooding.	3.0	Low
Hurricane (Natural Disaster Threats/Hazards)	Moderate	Minor	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	3.0	Low
Bulk Fuel Tank Explosion (Human Made Threats/Hazards)	Very Low	Significant	None	Bedrock has fuel storage. Fuel also in Cleveland.	3.0	Low
Civil Unrest / Public Riot (Human Made Threats/Hazards)	Moderate	Minor	None	Escalate if its near our areas and lock down buildings. Telling TMs to stay indoors if needed. WFH capabilities.	3.0	Low
Nuclear Reactor Accident (Human Made Threats/Hazards)	Very Low	Significant	None	Escalate if its near our areas and lock down buildings. Telling TMs to stay indoors if needed. WFH capabilities. Public sector mitigation including, first responders, assets and resources will provide significant mitigation for RKT property and personnel.	3.0	Low
Typhoon (Natural Disaster Threats/Hazards)	Very Low	Moderate	None	Weather monitoring capabilities, mass notification.	2.0	Low
Wildfire (Natural Disaster Threats/Hazards)	Low	Minor	None	Air quality monitors and filters for air intake systems (bedrock). Weather monitoring capabilities, mass notification.	2.0	Low
Water Supply Contamination (Human Made Threats/Hazards)	Low	Minor	None	Isolation valves for quarantining, focus team would shutoff water sources and alerts. Focus supplies water bottles on site.	2.0	Low
Water Supply Outage (Human Made Threats/Hazards)	Low	Minor	None	Focus supplies the water to TMs	2.0	Low
Landslide (Natural Disaster Threats/Hazards)	Low	Minor	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	2.0	Low

Threat/Type	Likelihood	Impact	Mitigating Controls	Control Description	Score	Rating
Heat Wave / Major Drought (Natural Disaster Threats/Hazards)	Low	Minor	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	2.0	Low
Vandalism / Sabotage (Human Made Threats/Hazards)	Low	Minor	None	24/7 monitoring of downtown locations. Cameras cover most of the downtown Detroit area. Real time reaction to a vandalism occurring.	2.0	Low
Workplace Violence (Human Made Threats/Hazards)	Very Low	Minor	None	Send people to take care of it. Notify The Pulse. Emergency intercoms on every floor to report incidents.	2.0	Low
Extreme Heat (Natural Disaster Threats/Hazards)	Low	Minor	None	Weather monitoring capabilities, mass notification.	2.0	Low
Chemical / Toxic Spill (Human Made Threats/Hazards)	Low	Minor	None	Escalate if its near our areas and lock down buildings. Telling TMs to stay indoors if needed. WFH capabilities. Public sector mitigation including, first responders, assets and resources will provide significant mitigation for RKT property and personnel.	2.0	Low
Tidal Wave / Tsunami (Natural Disaster Threats/Hazards)	Very Low	Minor	None	Weather monitoring capabilities, mass notification.	1.0	Low
Railroad Crash / Derailment (Human Made Threats/Hazards)	Very Low	Minor	None	24/7 monitoring service, shelter in place plans, local support.	1.0	Low
Lightning (Natural Disaster Threats/Hazards)	Very Low	No Impact	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	0.0	None
Sink Hole (Natural Disaster Threats/Hazards)	Very Low	No Impact	None	Weather monitoring capabilities (over 50MPH), mass notification to shelter in place. Service that coordinated weather warnings from the counties. TM is responsible for their own action. Monitor for damage to buildings if anything happens.	0.0	None
