Overview

Purpose

This policy establishes required practices for Business Continuity, Disaster Recovery, and Crisis Management across Rocket, LP. It ensures that resilience standards are defined, enforced, and aligned with business needs and industry standards to minimize the impact of disruptions and support sustained operations.

Scope

This policy applies to Rocket, LP and its in-perimeter subsidiaries, collectively referred to as the “Rocket” and to in-house and third-party applications, systems, and vendors. Entities may include overlays in their information security programs.

Objectives

This policy outlines the required practices to:

- Identify and manage risks to critical operations
- Maintain up-to-date business continuity and disaster recovery plans
- Ensure effective response and recovery through documented incident and crisis protocols
- Validate preparedness through structured testing, training, and exercising

Governance and accountability

Framework

The Resilience team establishes the requirements for the Rocket Resilience Program, which seeks to align with resilience best practices and industry frameworks.

Executive oversight

The Resilience team is responsible for defining, maintaining, and executing resilience standards, in collaboration with business and technology leaders.

Rocket’s Resilience team will align with senior business area, information security, and technology leaders for policy and program oversight, ensuring alignment with the company’s risk posture and regulatory expectations.

Roles and responsibilities

Resilience team

- Develop and maintain resilience requirements, policies, standards, and procedures
- Coordinate cross-functional planning for business continuity plans (BCPs), disaster recovery plans (DRPs), and crisis management plans (CMPs)
- Lead testing, training, and exercises
- Track resilience compliance and continuous improvement activities

Business area leaders

- Approve business impact analyses (BIAs) and business continuity plans (BCPs) within their areas
 - Approval authority may not be delegated
- Ensure plans are implemented and regularly reviewed
- Distribute protocols and provide training to their team members
- Execute business continuity plans as needed

Technology leaders

- Approve and maintain disaster recovery plans (DRPs) for owned systems
- Participate in recovery testing and remediation of failure points

All Rocket team members

- Understand their role in business continuity and resilience

Critical third-party vendors

- Must comply with Rocket's resilience expectations according to the service level agreements (SLAs)
- Participate in applicable assessments and exercises

Key Resilience components

Rocket is committed to ensuring operational resilience, business continuity, and disaster recovery through structured assessments, planning, and preparedness activities led by the Resilience team.

Resilience risk

- **Threat and hazard identification and risk assessments (THIRAs):** Conducted annually to identify and evaluate threats and hazards impacting business capabilities, processes, applications, and vendors.
- **Business impact analyses (BIAs):** Performed annually in collaboration with business leaders to assess the impact of disruptions, prioritize critical functions, and define Recovery Time Objectives (RTOs) and Recovery Point Objectives (RPOs).

Control efficacy

- Ensure operational resilience controls are effectively implemented and continuously improved to mitigate business continuity and disaster recovery risks.
- Oversee Single Points of Failure (SPoFs) identification and mitigation
- Lead multi-regional resilience coordination and execution

Compliance

Resilience works closely with the Regulatory Compliance Team to enforce regulatory requirements and ensure policy adherence.

Response and reconstitution

Resilience coordinates response and reconstitution efforts, ensuring rapid restoration of critical operations and IT systems following disruption.

Business Continuity Planning

Rocket must develop and maintain Business continuity Plans (BCPs) for each critical business process to ensure the continuity of critical business processes during disruptions.

- Business continuity plans will be developed and reviewed in coordination with business area leaders to align with organizational resilience objectives.

Crisis management

A crisis communication plan will be maintained to coordinate messaging for internal stakeholders, regulators, customers, and vendors as necessary. A crisis management team (CMT) with decision-making authority will oversee crisis response.

- Incident response procedures will be implemented to address disruptions promptly.
- Coordination with Incident Response and Crisis Management Teams will drive crisis resolution.

For further details, refer to the Incident Response Plan and the Crisis Management Plan.

Disaster recovery planning

Rocket requires a robust Disaster Recovery (DR) Program to ensure technology and data restoration within established RTOs and RPOs.

- Disaster Recovery strategies will be implemented and tested annually to support business continuity and resilience objectives.

For further details, refer to the Disaster Recovery Policy and Program Charter.

Exercising

Regular testing, training, and exercises must be conducted to validate resilience plans and ensure preparedness. Resilience-led testing activities include:

- **Operational resilience testing:** BCP, DR, crisis management plan validation.
- **Financial resilience:** Stress and shock testing.
- **IT and vendor resilience:** Ensure critical tier 0-1 system, application, and third-party resilience testing occurs on a regular cadence.
- **Training and leadership exercises:** Business continuity, crisis, and disaster recovery leadership simulations.

For further details, refer to the Resilience Test, Training, & Exercise Policy and Program Charter (RTTEP).

Metrics and reporting

Metrics

The Resilience team utilizes data-driven insights to refine resilience strategies. Key metrics include recovery time objective (RTO), recovery point objective (RPO), maximum tolerable period of disruption (MTPD), and prioritization of critical assets. Reporting requirements and supporting systems are detailed in the Resilience Program Charter and procedural documents.

Reports

All resilience-related assessments (THIRAs, BIAs, BCPs, and DRPs) will be documented in Business Continuity in the Cloud (BCIC), Rocket's resilience management platform.

Information and recommendations resulting from exercises will be written in after-action reports (AARs) for the stakeholders and provided within 2 weeks of the exercise date. Action items will be developed from the AAR and executed by exercise stakeholders, not the Resilience team.

Compliance and monitoring

The Resilience team is responsible for monitoring compliance with this policy, including tracking plan completion, testing results, and training participation.

Business and technology leaders are responsible for maintaining approved and up-to-date business continuity and disaster recovery plans for their respective areas in collaboration with the Resilience team. These leaders must directly review and approve associated BIAs and BCPs up to the C-suite level. Delegation of this responsibility is not permitted.

Gaps in compliance such as missing plans, overdue reviews, or failed tests, will be escalated to senior leadership for resolution.

Compliance will be assessed through regular reporting and internal reviews in alignment with Rocket's enterprise risk and audit programs.

Exceptions

Exception requests to this policy must be initiated by the responsible business or technology leader and approved by the most senior leader accountable for the affected process or system, in consultation with the Resilience Team.

All approved exceptions must:

- Be documented in writing, including scope, justification, and compensating controls (if applicable)
- Be reviewed at least annually, or upon a material change to the associated risk, system, or business function

Exceptions that remain unresolved or present elevated risk may be escalated to executive leadership for review.

Policy maintenance

This policy is reviewed and revised annually by the Resilience team in accordance with best practices and may be reviewed and revised more frequently to align with business strategy, objectives, or structural changes within Rocket.
